Changing the way you

control & manage people & assets

PSG VISITME

PSG AFRICA • POWERED BY SATEC

Who are we?

With over 20 years of field-proven systems integration heritage—and powered by SATec's pioneering technology launched in 2005—our story started well before that. With our feet firmly planted in the world of access control, CCTV, and electric fencing, we saw the future coming—and it was digital. So, we jumped in early, deploying some of the first rugged scanning devices to help manage visitors more efficiently.

What began as a bold idea to improve access control quickly turned into something much bigger.

Over the last 20 years, we've been building and fine-tuning our software — **PSG VisitMe** (powered by SATec). Piece by piece, feature by feature, we shaped it into what it is today: not just a visitor management tool, not just an access control system, but a full-on process management powerhouse. Whether it's verifying people or tracking assets, **PSG VisitMe** helps organisations take control of who (or what) comes and goes—making sites more secure, smarter, and a whole lot more efficient.

We customise your site's solutions
to mitigate, manage, and alleviate risks...

Turning RED zones into GREEN zones

What hardware do we supply & use?

Our scanner solution is a visitor management system based on a wireless, hand-held device which scans and captures vehicle and occupant information for visitors to an access-controlled site.

We use rugged and high-performance scanner devices to power our multi-faceted and streamlined **PSG VisitMe** software.

Scanner Specifications:

- a large 5.5" HD display,
- ultra-fast octa-core processor,
- reliable 4G LTE connectivity,
- a built-in 13MP camera for quick and clear photo capturing,
- GPS for location accuracy,
- a long-lasting battery along with a battery docking station,
- Android 11/13,
- IP65-rated durability.

What benefits can we offer you?

Our Access Control and Visitor Management solutions are 100% digital making it accessible, diverse and easy to manage. Helping make your visitor procedures easy, fast and less of a concern for you. Enabling you to find out “what” is moving in and out of your gate and providing you with sufficient/accurate data as to the reason why, or perhaps identify the “who”.

01

License Decryption

Easily scan driver’s licences and vehicle discs (with the scanner device) to automatically decrypt and capture all relevant information embedded. Data is securely stored on the PSG VisitMe scanner and synced to your portal for easy access and compliance records.

02

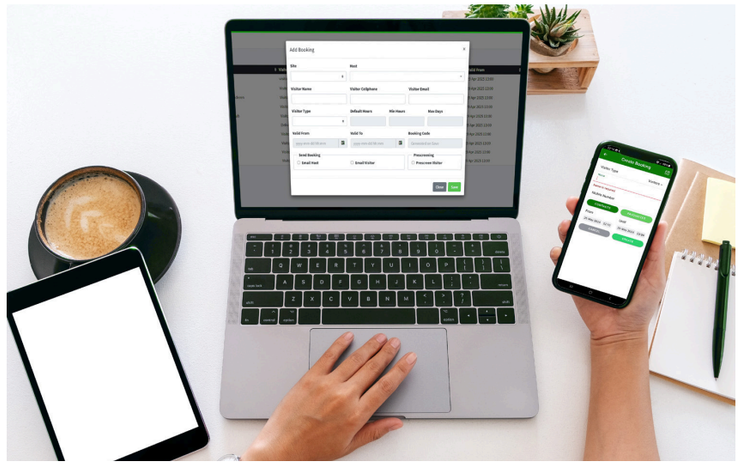

Staff QR Codes

Generate unique QR codes for staff and contractors on the portal, which include detailed personnel info (name, department, company, contact details, and a photo). This enables fast access at the gate by quickly scanning the QR Code & enables verification by on-screen photo matching at the gate.

03

Pre-approval

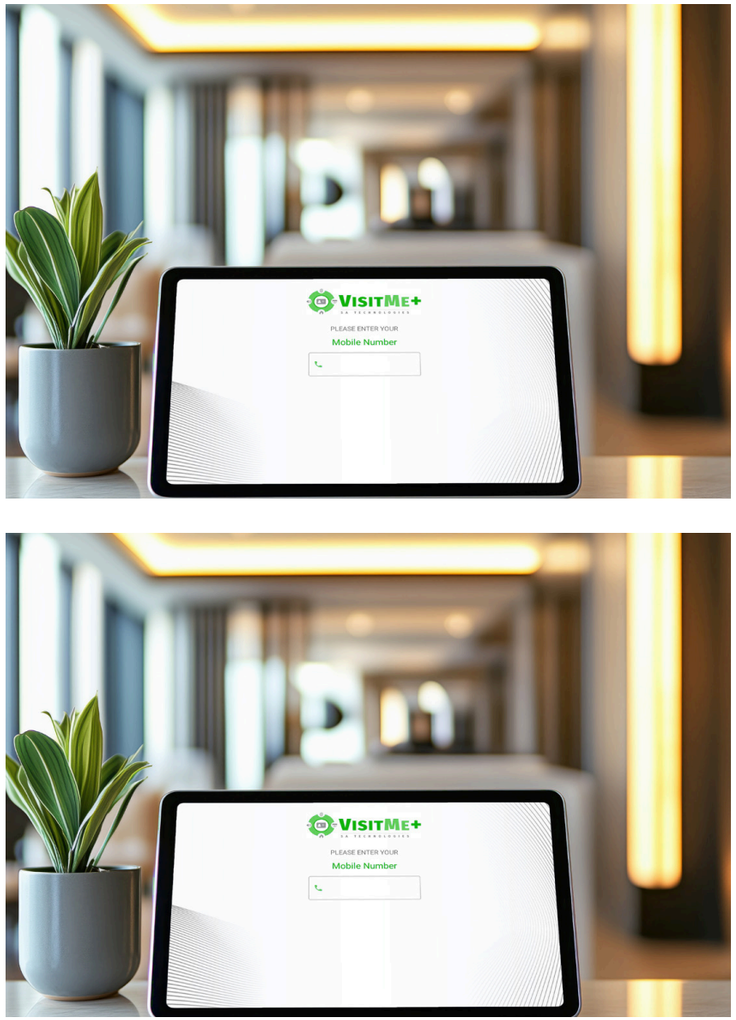

Create bookings in advance for visitors and contractors to streamline their entry and exit. Bookings can be issued from the portal or mobile app and sent in the form of a QR code or PIN code for fast, validated access at the gate.

04

Reception Check-in

Upgrade your reception with a digital check-in solution. With our reception tablet solution visitors can confirm appointments on arrival, and hosts are instantly notified. Optional visitor stickers with printed details improve on-site identification and access control.

05

Passengers

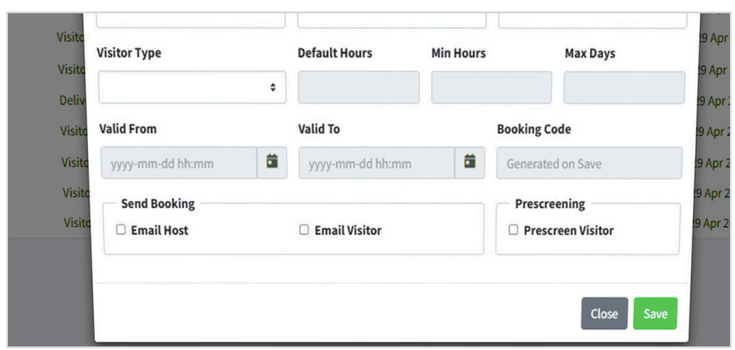

Concerned about passengers entering or exiting your site? With PSG VisitMe, you can effortlessly add passengers alongside any visitor, contractor, or employee during the check-in process. Capture all necessary details such as full name, contact information, and even scan their driver's licence for instant validation. This ensures that everyone entering your premises — whether they're behind the wheel or not — is properly recorded, enhancing overall site security, compliance, and traceability.

06

Entry Limit Control

Control how many times a visitor or contractor can enter your site — or within what time frame.

This prevents unauthorised entries and helps ensure secure, controlled access to your premises.

07

Instant Notifications

Stay informed with real-time alert notifications.

Receive instant notifications for:

- The entry of any individual with an expired driver's licence
- The entry of any vehicle with an expired licence disc
- Any failed validation checks (e.g. expired medicals)
- Any detection of duplicate data, such as reused PO or delivery note numbers

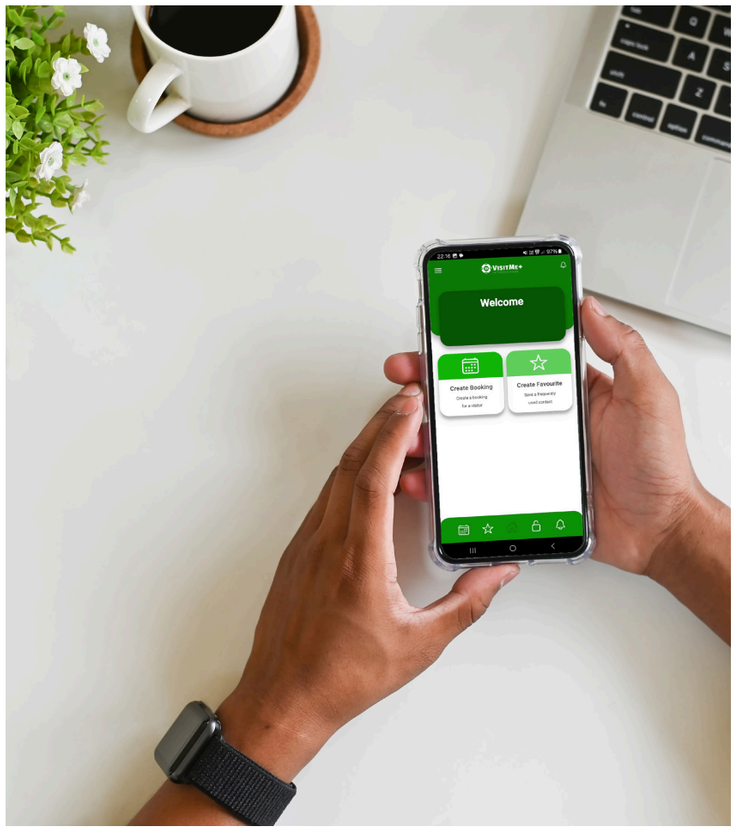

These alerts ensure you're always aware of potential risks or compliance issues the moment they occur — helping you take immediate action.

08

Smart Mobile App

The PSG VisitMe Plus mobile app enhances resident and staff convenience:

- Remotely open gates using the in-app digital remote
- Easily book and send visitor access codes
- Save frequent visitors for quick future bookings as favourites
- Receive real-time notifications sent from the portal

09

After-Hours Entry Alerts

Automatically get notified when any person enters or exits the site after hours, improving security oversight and accountability during non-operational times.

10

Digital Records

Scan or capture every vehicle, asset, container, and seal to maintain a secure digital record. If an incident occurs, reports are easy to generate and use for investigations or audits.

11

Time & Attendance

Use staff and contractor QR codes to automatically log arrivals and departures. Easily generate reports for time and attendance tracking, or calculate time-on-site for operational insights and compliance checks.

This feature supports workforce management, payroll accuracy, productivity analysis, and internal policy enforcement with minimal manual effort.

12

Duplicate Data Detection

PSG VisitMe instantly checks for duplicate entries such as PO numbers or delivery note references. If a match is found, it alerts the guard—helping to prevent fraud, theft, incorrect logging, and ensuring data integrity, process reliability, and operational risk reduction.

13

Photographic Evidence

Easily take and log photos of stock, documents, equipment, or seal conditions during check-in or check-out. All images are securely stored on the portal for reporting, traceability, proof of delivery or condition, enhanced accountability, better site compliance and security, and simplified incident investigations when needed.

14

Dynamic Panels

Our Dynamic Panel functionality allows you to fully customise scanning, capturing and validation procedures. From capturing information through questions to uploading photos or triggering conditional steps — we can build it. Each panel is tailored to suit your workflow, industry, and compliance needs.

15

Automatic Odometer Reading

Capture vehicle odometer readings automatically using the scanner's camera — no typing or photo uploads required. This reduces human error and blurred unreadable photos while speeding up the capturing of data.

16

Mandatory fields

Each feature and procedure on the scanner can be configured to include mandatory fields, ensuring that no critical information is skipped or left incomplete.

17

Checklists & Inspections

Add site-specific questions or inspection points to your procedures. Whether it's checking for PPE, vehicle damage, or destination details, your checklist is fully customisable.

18

Validations

Upload and track expiry dates for safety files, medicals, and induction certificates. When a person is scanned in, the scanner verifies that all their credentials are valid — flagging and bringing up a scanner alert for expired documents on the spot.

19

Logistics Trip Calculator

Monitor and manage logistics trips with details such as:

- Route distances and estimated travel time
- Driver, vehicle, and asset tracking
- Delivery performance and arrival verification

Making sure the same truck, with the same driver and the same load that left point A arrives at point B in a timely manner. Improving delivery accuracy, enhancing driver accountability, reducing operational risk, and streamlining logistics reporting.

21

Evacuation & Roll Call

In the event of an emergency, the PSG VisitMe portal allows you to quickly access a live list of everyone currently on-site. With just a few clicks, you can generate an accurate roll call report to verify that all staff, contractors, and visitors are accounted for. This feature supports efficient evacuations, enhances emergency preparedness, and ensures compliance with health and safety regulations.

20

Online Intelligence Integration

Our integration with Online Intelligence allows seamless communication between systems, providing a holistic view of your site's security and operational data. Learn more at Online Intelligence.

22

Navic Integration

Through our Navic partnership, every number plate and licence disc scanned is automatically checked against a national stolen vehicle database. Alerts are triggered, allowing you to respond proactively.

23

Centralised Online Records

Visitor, vehicle, asset, and staff data is securely stored and accessible via the PSG VisitMe portal. View logs, run reports, and access information in just a few clicks for faster decision-making, improved oversight, and streamlined operations.

It's not about the individual features, it's about how they are perfectly & uniquely pieced together...

Think of **PSG VisitMe** like a puzzle, except no two puzzles are the same.

Every site is different, and so is every solution we build. We don't just throw features together; we carefully piece them to fit your exact needs, creating something that's not only functional but truly powerful. It's the magic of how everything works together that sets **PSG VisitMe** apart.

The end result? A perfectly tailored visitor management system that feels like it was made just for your site, because it was.
